Appendix F. RPI Common Data Model

Nov-07

RPI Common Data Model

Installations & Environment BT Directorate

13 Jan 2005 (Rpi CDM 2.1a RPIR IDEF.vsd)

Modeling Guidelines and Conventions

Attribute (DoD/AF OV_2 Logical and Common Data Model): Attribute names will be in Title Case format with all terms separated with underscores and no special characters or blanks. For example: BRAC_Round_Year_Date or Facility_Book_Value_Amount. A Class Word, which describes the category to which the Attribute belongs (for example, date, identifier, or quantity), must be added to the end (as a suffix) of each Attribute's name.

Data Element (OV-6c, ERPM, Core Data Element): Data element names will be in Title Case format with all terms including prepositions and conjunctions, separated with spaces. Use of spaces will distinguish Data Elements from attributes. Use the following format: Prime Word (logical grouping/category), Class Qualifier (Optional), Class Word. For example: BRAC Round Year Date or Facility Book Value Amount.
