

Space Based Infrared System (SBIRS) - High Information Paper

- On April 20, 2004, the Acting Under Secretary of Defense (Acquisition, Technology, and Logistics) convened the Defense Acquisition Board (DAB) to review the status of the SBIRS-High program.
- The review focused on space segment status, ground segment status, and the initiation of an effort to re-plan the program associated with a one-year slip in the Geosynchronous Earth Orbit launches and a delay in the delivery of the Highly Elliptical Orbit-1 sensor.
- The review also addressed contract performance to date, the cost and schedule impacts on the program, and additional funding requirements associated with the re-planning.
