MEMORANDUM FOR DIRECTOR, DEFENSE LOGISTICS AGENCY

SUBJECT: Acquisition Domain Architecture Information Request

The DoD Acquisition Community has a requirement to establish a domain architecture - one objective of which is to guide domain investments in and oversight of Information Technology (IT) systems. The DoD Acquisition Governance Board, under the general guidance of the DoD Business Modernization Management Plan, is directing this effort. In support of the Acquisition Domain's continuing effort to gather information about current systems in the portfolio, I request your expeditious attention to the completion of the Acquisition Domain System Inventory Datasheet (SV-4) regarding Acquisition Domain systems or sub-systems used for:

- Program Management & Oversight
- Procurement & Contract Management
- Financial Management
- Systems Engineering
- Acquisition Logistics & Training
- Manufacture & Production
- Science and Technology
- Other (please specify)

Request your organization review and fill out the attached data sheet with the IT systems and subsystems you use in conducting acquisition business. This data request should gather information from all levels of your organization so that we get as complete a response as possible.

Please have your staff review the pre-populated data to make sure it is accurate and update it as required. Complete the remaining data fields and add missing systems and subsystems that are not included in the list. Our objective is to identify a complete list of business systems and embedded subsystems supporting the acquisition process and to map those systems to the functions/processes that they support. We are making

every effort to limit the number of data calls, use existing data to pre-populate data fields, and request common data that can be used by multiple organizations. We do recognize the requested information is a sub-set of the previous request and may have to be augmented at a later date. Our plan in the near future is to establish a web-based capability to facilitate the streamlining of the Domain's Communities of Interest (COI) abilities to update and validate pertinent data. This request is also going to Army, Navy, Air Force, and other OSD Acquisition elements as part of the ongoing effort for an accurate and comprehensive joint architecture development effort.

The datasheet is planned for completion in three separate iterations as outlined below:

- User Data Input: The first data call targets the system users. The suspense date for completing the user data fields is **July 23, 2004**.
- Owner Data Input: The data gathered from the users will identify the system "owners" who will then be the target of a second data call. The suspense date for completing the owner data fields is **August 6, 2004**.
- BMSI data: Additional BMSI Fields will be completed by the system "owners". The suspense date for completing the BMSI Fields is **August 13, 2004** although it may be done concurrently with the owner data fields.

Specific instructions are enclosed, with detailed descriptions of the information requested. Please direct any questions and return the completed excel datasheet to Gert Berthold, 703-614-3883 (DSN 224), email: Gert.Berthold.CTR@osd.mil, who is the Point of Contact for this effort.

- Other (please specify)

Request your organization review and fill out the attached data sheet with the IT systems and subsystems you use in conducting acquisition business. This data request should gather information from all levels of your organization so that we get as complete a response as possible.

Please have your staff review the pre-populated data to make sure it is accurate and update it as required. Complete the remaining data fields and add missing systems and subsystems that are not included in the list. Our objective is to identify a complete list of business systems and embedded subsystems supporting the acquisition process and to map those systems to the functions/processes that they support. We are making

every effort to limit the number of data calls, use existing data to pre-populate data fields, and request common data that can be used by multiple organizations. We do recognize the requested information is a sub-set of the previous request and may have to be augmented at a later date. Our plan in the near future is to establish a web-based capability to facilitate the streamlining of the Domain's Communities of Interest (COI) abilities to update and validate pertinent data. This request is also going to Army, Navy, Air Force, and other OSD Acquisition elements as part of the ongoing effort for an accurate and comprehensive joint architecture development effort.

The datasheet is planned for completion in three separate iterations as outlined below:

- User Data Input: The first data call targets the system users. The suspense date for completing the user data fields is **July 23, 2004**.
- Owner Data Input: The data gathered from the users will identify the system "owners" who will then be the target of a second data call. The suspense date for completing the owner data fields is **August 6, 2004**.
- BMSI data: Additional BMSI Fields will be completed by the system "owners". The suspense date for completing the BMSI Fields is **August 13, 2004** although it may be done concurrently with the owner data fields.

Specific instructions are enclosed, with detailed descriptions of the information requested. Please direct any questions and return the completed excel datasheet to Gert Berthold, 703-614-3883 (DSN 224), email: Gert.Berthold.CTR@osd.mil, who is the point of contact for this effort.

MEMORANDUM FOR DIRECTOR, OPERATIONAL TEST & EVALUATION

SUBJECT: Acquisition Domain Architecture Information Request

The DoD Acquisition Community has a requirement to establish a domain architecture - one objective of which is to guide domain investments in and oversight of Information Technology (IT) systems. The DoD Acquisition Governance Board, under the general guidance of the DoD Business Modernization Management Plan, is directing this effort. In support of the Acquisition Domain's continuing effort to gather information about current systems in the portfolio, I request your expeditious attention to the completion of the Acquisition Domain System Inventory Datasheet (SV-4) regarding Acquisition Domain systems or sub-systems used for:

- Program Management & Oversight
- Procurement & Contract Management
- Financial Management
- Systems Engineering
- Acquisition Logistics & Training
- Manufacture & Production
- Science and Technology
- Other (please specify)

Request your organization review and fill out the attached data sheet with the IT systems and subsystems you use in conducting acquisition business. This data request should gather information from all levels of your organization so that we get as complete a response as possible.

Please have your staff review the pre-populated data to make sure it is accurate and update it as required. Complete the remaining data fields and add missing systems and subsystems that are not included in the list. Our objective is to identify a complete list of business systems and embedded subsystems supporting the acquisition process and to map those systems to the functions/processes that they support. We are making every effort to limit the number of data calls, use existing data to pre-populate data fields, and request common data that can be used by multiple organizations. We do

recognize the requested information is a sub-set of the previous request and may have to be augmented at a later date. Our plan in the near future is to establish a web-based capability to facilitate the streamlining of the Domain's Communities of Interest (COI) abilities to update and validate pertinent data. This request is also going to Army, Navy, Air Force, and other OSD Acquisition elements as part of the ongoing effort for an accurate and comprehensive joint architecture development effort.

The datasheet is planned for completion in three separate iterations as outlined below:

- User Data Input: The first data call targets the system users. The suspense date for completing the user data fields is **July 23, 2004**.
- Owner Data Input: The data gathered from the users will identify the system "owners" who will then be the target of a second data call. The suspense date for completing the owner data fields is **August 6, 2004**.
- BMSI data: Additional BMSI Fields will be completed by the system "owners". The suspense date for completing the BMSI Fields is **August 13, 2004** although it may be done concurrently with the owner data fields.

Specific instructions are enclosed, with detailed descriptions of the information requested. Please direct any questions and return the completed excel datasheet to Gert Berthold, 703-614-3883 (DSN 224), email: Gert.Berthold.CTR@osd.mil, who is the point of contact for this effort.
