FOREWORD

The **Department of Defense (DoD) Supply System Inventory Report** is an annual publication. It provides summary statistics on the status of DoD supply system inventories. The report summarizes, by dollar value, inventories by DoD Component, retention categories, funding source, and national inventory control points.

Commodities in this publication are grouped into two categories - "Secondary Items" and "Class V Ammunition." Secondary items are defined as an item that is not defined as a principal item and includes reparable components, subsystems, and assemblies, consumable repair parts, bulk items and material, subsistence, and expendable end items, including clothing and other personal gear. Class V Ammunition is ammunition of all types (including chemical, biological, radiological, and special weapons), bombs, explosives, mines, fuses, detonators, pyrotechnics, missiles, rockets, propellants, and other associated items.

DoD Manual 4140.01-V10 contains guidance and definitions for this report.

NOTE: Beginning with fiscal year (FY) 1991, inventory was valued under the standard DoD valuation methodology valued at latest acquisition cost. The value for reparables requiring repair was reduced by the cost of repair; and inventory stratified as "Potential Reutilization Stock" and "Anticipated Condemnations" was valued at net realizable value, i.e., salvage prices (2.04% of latest acquisition cost for FY 2015). In FY 2003, DoD began transitioning the inventory valuation method to moving average cost (MAC).

2015 d/	75,182,011	1,359,326	6,830,110	8,170,190	137,795	51,508	91,730,940

a/ See Note on the FOREWORD page regarding overall inventory valuation methodology and the valuation of "Potential Reutilization/Disposal Stock" at net realizable value, i.e., salvage prices.

b/ Prior to 2011, Potential Reutilization Stock included anticipated condemnations. Anticipated condemnations was added as a category effective September 30, 2011.

c/ Figures may not add to totals due to rounding.

d/ The dollars in this report are calculated under the DoD Comptroller's acquisition cost methodology mandated for all DoD annual accounting reports and financial statements. In addition, the inventory value for materiel in need of repair is reduced by its repair cost. Finally, anticipated condemnations and potential reutilization stock is reduced to market prices for surplus property sold by DLA Disposition Services.

GLOSSARY

Approved Acquisition Objective (AAO). The quantity of an item authorized for peacetime and wartime requirements to equip and sustain U.S. and Allied Forces, in accordance with current DoD policies and plans. This quantity shall be sufficient to support other U.S. Government Agencies, as appropriate.

War Reserve Materiel. Mission essential secondary items; principal and end items computed as part of the acquisition process; and munitions authorized for sustainability planning in Secretary of Defense Planning Guidance. In the SSIR, secondary items classified as War Reserve Materiel are shown as a memo entry subset of the Approved Acquisition Objective.

Intransit Assets. Materiel that is between storage locations, either wholesale or retail or materiel shipped from vendors after acceptance by the government but not yet received by the inventory manager. Intransit assets are not included in the records of wholesale inventory used in the stratification process.

Anticipated Condemnations. Value of unserviceable inventory that is not expected to survive repair. Actual condemnation occurs at a future time (e.g. in the coming months or years) at which point the items will no longer be part of the Services' on-hand inventory.

Economic Retention Stock. That portion of the quantity of an item greater than the AAO determined to be more economical to retain for future peacetime issues than to dispose and satisfy projected future requirements through new procurement and/or repair. To warrant economic retention, items must have a reasonably predictable demand rate.

Contingency Retention Stock. That portion of the quantity of an item greater than the AAO and economic retention stock for which there is no predictable demand or quantifiable requirement, and that normally would be allocated as Potential Reutilization/Disposal Stock except for a determination that the quantity will be retained for specific contingencies.

Potential Reutilization Stock: Component materiel identified by an item manager for possible disposal but with potential for reutilization; or (2) materiel that has the potential for being sent by an item manager to the Defense Reutilization and Marketing Service for; (a) possible reutilization by another DoD Component or by a Federal, State, or local government agency; or for disposal through sale to the public.

Excess: Materiel that has completed reutilization screening within the DoD and is not required for the needs and the discharge of responsibilities of any DoD activity.

Secondary Item: An item that is not defined as a principal item and includes reparable components, subsystems, and assemblies, consumable repair parts, bulk items and material, subsistence, and expendable end items, including clothing and other personal gear.
