UiPath Academy

Non-Technical Courses

Business Analyst

The Business Analyst Learning Plan will enable you to map AS IS, and propose TO BE business processes that need to be automated. Define the process requirements for automation, clarify the inputs and expected outputs and create the necessary RPA documentation. Bridge the knowledge (gap) between business and development language **Go to training»»**

Implementation Manager

The Implementation Manager Learning Plan will enable you to form the RPA team that will build the setup and deliver the program across one or multiple business units. Manage the RPA team, perform resource planning, handle teams availability and schedule. Estimate costs and create documentation. Perform risk analysis and run project governance meetings. Measure benefits realization **Go to training»»**

Technical Courses

Infrastructure Engineer

The Infrastructure Engineer Learning Plan will enable you to prepare the infrastructure required for UiPath Product installations and troubleshooting. Set up servers for Orchestrator and Kibana and accounts for all the developers, end-users and robots. Make recommendations related to infrastructure, required IT setup and the inter-dependency between these elements. Update and maintain the hardware infrastructure and work closely with and provide support to the RPA Solution Architect. **Go to training»»**

Solution Architect

The Solution Architect Learning Plan will enable you to define the Architecture of the RPA solution by translating business requirements and by creating the architecture and design artifacts. Manage the end to end performance of the agreed solution design. Create and distribute the RPA best practices and automation standards within the client development team. Monitor the progress of automation and validate automation estimations and timelines. **Go to training»»**

RPA Developer

The RPA Developer Learning Plan will enable you to build and test RPA solutions for your organisation/department, based on provided requirements. Maintain, support & debug RPA solutions in production. Create dashboards enabling performance monitoring and estimate automation duration. Create DSD documentation, MTP checklists, code review and document implemented solutions. **Go to training»»**
