

Company Name: Juniper Networks

Author: David Mihelcic, Federal CTO Juniper Networks

FY2018 NDAA section: 808 - Policy Advisory Committee on Technology

Juniper Networks believes that DOD could benefit from more open engagement with leading technology firms, such as section 808 proposes. We encourage DOD to stand up this advisory committee as soon as possible. Considering that so many of DOD's critical operations have a network component to them, we urge DOD to ensure that the advisory committee include executives from multiple information and communications technology companies, particularly network hardware and software providers, whose solutions manage the data traffic for mission critical operations.
