

Joint Deficiency Reporting System

Tom Bryant

22 October 2008

Background

- EI Website - Stood Up - May 2001
 - Engineering Investigations (EIs) & Hazardous Material Reports (HMRs)
- NAMDRP - Mar 2003
 - Added Product Quality Deficiency Reports (PQDRs)
 - Added Aircraft Deficiency Reports (ADRs) - Sep 2005
- JDRS – May 2008
 - Integrated Air Force, Army Aviation, Coast Guard Aviation, DCMA
 - Report Types: EI, HMR, PQDR, ADR, MDR and T&E DRs

Joint Deficiency Reporting System

JDRS Summary

Background:

- Directed by Joint Aeronautical Logistics Commanders (JALC) to develop a Joint Deficiency Reporting System (JDRS) based on NAVAIR's NAMDRP application that will provide a common, seamless solution for deficiency reporting and resolution management across the Aeronautical Enterprise (at minimum)

End Product/Outcome:

- Deploy JDRS application that satisfies each participating services Spiral 1 requirements within schedule and resources.
- Complete follow-on requirements not worked during Spiral 1.

Participation:

- NAVAIR – Program Lead / CDA
- Air Force
- Army (Aviation/Missile)
- Coast Guard (Aviation)
- DCMA (Aeronautical Div)

Benefits:

- DR visibility across aeronautical enterprise
- CSI visibility across aeronautical enterprise
- Reduction of total ownership cost
- Ease of use
- Reduced cycle time
- Improved exhibit inventory management
- Improved reliability

JDRS Joint Deficiency Reporting System

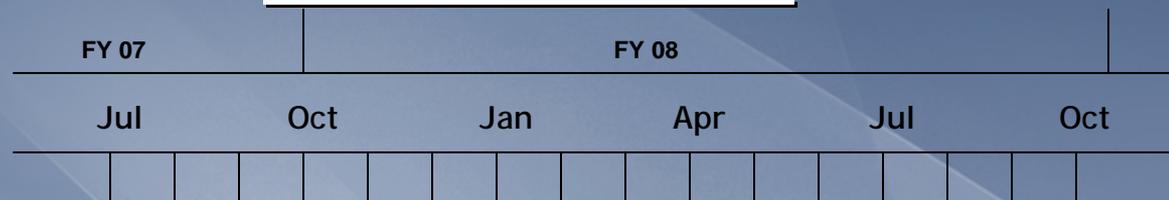

TO BETTER SERVE THE WARFIGHTER

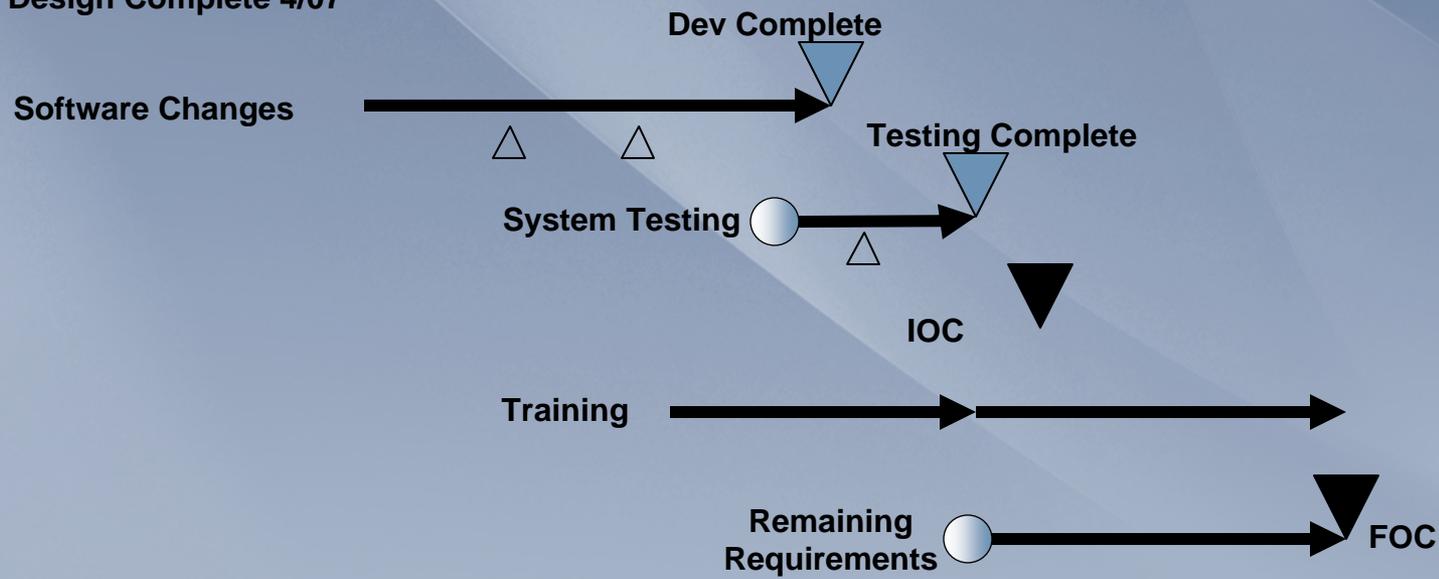

Joint Deficiency Reporting System

JDRS Schedule

System Design Complete 4/07

➔ JDRS Sustainment

Joint Deficiency Reporting System

NAMDRP to JDRS

Currently NAMDRP serves over 9,400 users averaging 225 transactions per day and 4.5 million hits per year.

Serving the Navy, Marines, Air Force, Army, Coast Guard, DCMA and other agencies, JDRS will support over 20,000 users processing 50,000 plus deficiency reports annually.

Joint Deficiency Reporting System

JDRS Features

- Workflow Managed DR Processing (Includes Interservice)
- Comprehensive Search, Ad Hoc Query & Mgt Reports
- Defense Message Input/Output
- CSI / CAI Identification
- Exhibit Shipping (FedEx) and Traceability
- Technical Dialog – Searchable, Can Be Permanent Part of Record
- Support Team Lookup – Warfighter to Engineering/Quality POCs via Equipment Breakdown, Directs DRs and Tech Dialogs
- Chat Room

Joint Deficiency Reporting System

JDRS Follow-on Efforts

Planned

- JDRS Sustainment (Changes Resulting From Joint CCB)
 - AF Isolated Units, AF/Army Interfaces, CG Upgrades
- Tech Publication Deficiency Reports (TPDRs)
- JTDI Fleet Input Module / JDRS “Lite”
- Critical Item Management
- Aircraft Baseline Trouble Reports (BTRs)
- Ordnance DRs

Potential Adds

- REI's (Request for Engineering Information)
- Test & Evaluation Community DRs (including Software)

ST Lookup

This tool identifies the applicable Engineering and Quality Support Team points of contact that are responsible for a major system component or assembly. Each level identifies ST POCs for DR report submissions. The ST POCs are found by either searching by the component's assembly part/model number or by scrolling through an equipment category breakdown listing.

Equipment Categories:

Since all part/model number information may not be available in the database, the proper ST POC may be determined by scrolling through an equipment category tree. Scroll through and find the major equipment headings applicable to the particular component. Click on "Lower Level" and scroll through and find the applicable equipment sub-category. Continue clicking "Lower Level" of the equipment tree until only "Select" is available. This will ensure the DR will be sent directly to the appropriate ST POC.

Part/Model Nr. Search:

To find an applicable ST POC, enter the part number or model number of the component. Enter the assembly or end item part/model number of the component if it is a smaller part of a much larger assembly. Portions of the part/model number may be entered for the search and all records with that combination of numbers will be returned. Enter general forms of the part/model number. If the part/model number is too specific, the search may not retrieve any records. For instance, if the search for 123456-7 does not return any records, try to search on 123456. If that does not return any records, search on 12345. Keep reducing the string of numbers until you retrieve a record. If you still do not retrieve the number you are looking for, then do a search through the Equipment Category.

If you are unable to find the part you are looking for, select the most likely ST and the Clearing House Representative will determine the correct ST.
