Army					
Operational Camouflage Pattern Army Combat Uniform (OCP-ACU)					
Improved Hot Weather Combat Uniform (IHWCU)					
Fire Retardant ACU (FR ACU)					
Army Combat Pant (ACP)					
Army Combat Shirt (ACS)					
Army Aircrew Combat Uniform (A2CU)					
Nomex					
Joint Special Operations Capable					
Grey - Not Evaluated					
Amber - Under Evaluation					
Red- NOT Approved					
Green - Approved for Treatment					
<p>Approved for Treatment means that the garment treated by the company has been tested to ensure that the garment is in compliance with the EPA labeled initial treatment concentration of 0.52% w/w. Second, the factory treated garments are then laundered IAW AATCC Method #135-204 and subsequent samples are taken at established time points based on the Service and garment. These samples are then tested for permethrin residual in the fabric and also sent to the USDA CMAVE laboratories for bite protection testing. In order to ensure that the garment is in compliance with the EPA labeled initial treatment concentration EPA label-required permethrin concentration in the garment and also provide the required % of bite protection at established time points.</p> <p>For example, in the case of a factory treated ACU, a garment must have 0.52% w/w +/- 10% permethrin in the fabric after initial treatment prior to laundering. The garment must also provide 90% bite protection after 50 launderings. Failure to meet either or both of these criteria means the garment is NOT APPROVED for treatment by that method or company.</p> <p>The 6 oz aerosol spray may be applied to uniforms not previously treated by the factory, IDA or 2 Gallon Sprayer. May not be applied to uniforms containing Flame Retardant. Impact on infrared (IR) not known, so may not be suitable for combat or hostile environments.</p>
